Information technologies

Information technologies are actively penetrating the life of society and families. Opportunities and conveniences create objective prerequisites for the use of information technologies in the field of education, work and leisure.

Information
technologies
Information
technologies are
processes that use a
set of tools and
methods for
collecting,
processing, storing
and transmitting data

Internet

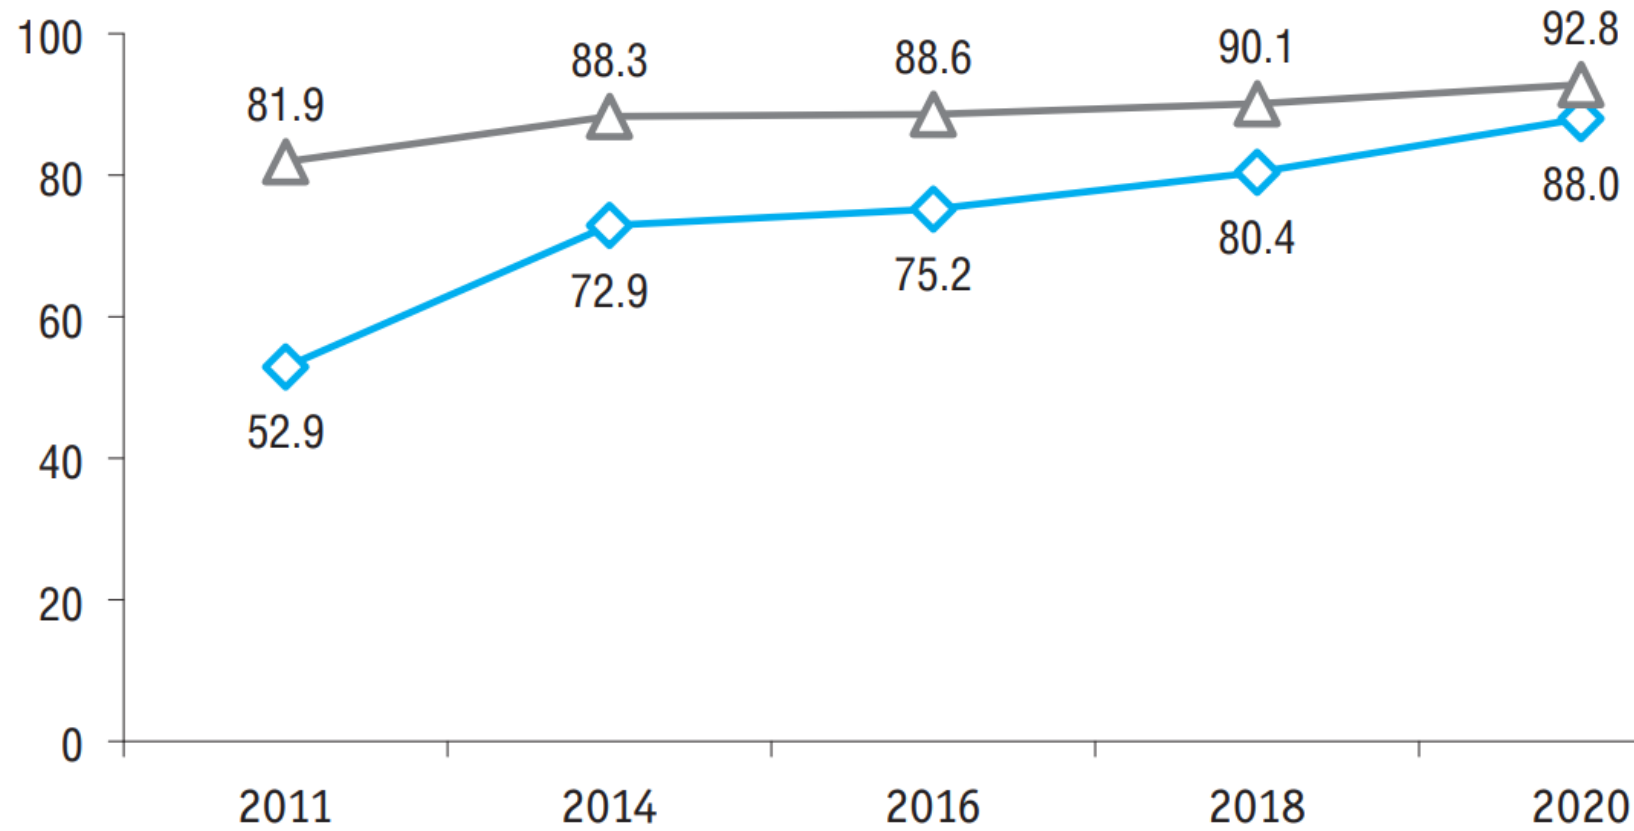

All types of information services that exist in the traditional economy are quite easily integrated into the Internet.

Important dates in the development of information technology

Date	Event
1960	SABRE (Semi- Automatic Business Research Environment.
1962 г.	«Galactic Network».
1966 г.	ARPA (Advanced Research Project Agency).
1967 г.	ARPAnet.
1972 г.	Telecommuting
1975 г.	Frenchman Roland Moreno invented and patented an electronic memory card.
1977 г.	S.W.I.F.T. (Society for Worldwide Interbank Financial Telecommunication).
1977 г.	Vinton Cerf, program director of SATNET (a division of ARPA), demonstrated for the first time the transmission of data using the TCP protocol over three different networks.
1983 г.	The ARPANET network (USA) switched to the TCP IP information transfer protocol.
1998 г.	Google.

Statistics

Information technologies have demonstrated rapid growth in their formation and development in modern socio-economic conditions.

Thank you
